

We are hiring!

Driven scientist with an entrepreneurial spirit

Our vision is to provide game-changing functional diagnostic tools that give cancer patients significantly better and longer lives. We are growing and are looking for the best people to join us in building the company and making this vision come true.

Job description

A key part of the job will consist of technical and analytical product development within in vitro diagnostics based on patient-derived cancer cell culture and functional analysis using drug screening and imaging. It will entail improving established methods and setting up new methods, but you will also take part in routine work such as establishing patient-derived cell cultures, drug testing and quality management. You need to be able to work independently. We are, however, a strong team working tightly together in the same direction, constantly sharing ideas and helping each other out when faced with challenges. We have projects with hospitals, universities and industry partners that you will take part in at different levels based on your preferences and current skills, including project management, data presentation and work on academic papers.

Qualifications

We are looking for self-motivated individuals with a passion for technology, science and health care. What skills you have gained through past studies and work experiences may vary, but what is crucial is that you have the mindset of a learner and do not give up easily. You must be curious, open-minded and like to solve problems. It is important that you pay attention to detail and the quality of your work. A broad technical and analytical background is an advantage.

Application

Be personal and authentic, we want to get to know you. Describe yourself, your past work experiences and why you want to join Oncosyne. Tell us about your expectations, fears, strengths and weaknesses going into this job.

Please attach a CV with relevant recommendation letters and/or job references.

- We are conducting job interviews from 22nd of May throughout June.
- Application deadline is 15th of June.
- Start is preferably August/September 2024

At Oncosyne you will get the opportunity to shape future cancer treatment and significantly improve the quality of life and survival of cancer patients. You will work with other great people in a passionate working environment at Oslo Cancer Cluster Incubator. Being among the first employees of a growing start-up you will get unique opportunities for personal growth and advancement. We are looking forward to receiving your application and getting to know you.

Please send the application per email to post@oncosyne.no
